Group Project: Page B

We have gathered data covering the main aspects of the NBA (National Basketball Association). The key entities we have included are the game information, player statistics, team descriptions, player identification and player history. These entities include important data such as player salaries, heights, game statistics, positions, winning statistics, and more that will help us directly or indirectly answer our seven questions that we initially defined. The Game entity records data for games in a season, including information on the date, score, outcomes and locations of a game. The Player Statistics entity tracks each player's performance and contributions for a given game. The Team entity includes a given team's ID, court information, players, as well as working staff and conference.

Below are several rows of sample data to be used for the **Player** entity:

PlayerID	FirstName	LastName	Height	College	Position	DOB
76001	Alaa	Abdelnaby	6-10	Duke	Forward	1968-06-24
76003	Kareem	Abdul-Jabbar	7-2	UCLA	Center	1947-04-16
1505	Tariq	Abdul-Wahad	6-6	San Jose State	Forward-Guard	1974-11-03
949	Shareef	Abdur-Rahim	6-9	California	Forward	1976-12-11
